L O C A.

Taur. — Fossile in colle taurinensi - Collis taurinus, quoad geologicam aetatem, ad formationis tertiariae strata media, (miocenica Lyell) attinet, et constat potissimum arenaria serpentinoso, ac marna grisea, seu *mollassa*.

Dert. — Fossile in collibus Dertonae. - Dertonae ager miocenicae aetatis et ipse est; at marnas griseas unice continet.

Ast. — Fossile in collibus astensibus. - Peramplius astensis ager, animalibus fossilibus ditissimus, ad strata superiora (pliocenica Lyell) formationis tertiariae adnumeratur, praebetque arenam saepius minutam (crag rubrum Lyell) ac marnas obscure griseas (corallinum Lyell).

Villalv. — Fossile Villalverniae prope Dertonam. - Hac in regione agro astensi coetanea innumera inveniuntur testacea, quorum quamplurima microscopica, in arena argillosa sepulta.

Pedem. — Fossile Pedemontii. - Pedemontana in genere fossilia nuncupamus, quae in collibus Castri-novi, Barderatarum, Castellinardi, Albae Pompejæ, Masserani etc. occurrunt, quaeque cum Astae aetate conveniunt, et in arena, marna, vel argilla pariter praeterpropter adveniuntur.
